

# Narrative Description of Private Lead/Galvanized Steel Service Replacement

## SCOPE OF WORK

1. Owner hereby authorizes Stoughton Utilities, its employees, agents, and contractors, and the City building inspector and his or her designees, to enter upon the Property to do the following:
  - a. Ascertain whether the private water service line is made of either lead or galvanized steel that is downstream of a known lead service.
  - b. If the private water service line is made of lead or galvanized steel, to remove and replace the water service line with copper piping from the curb stop up to and including the water meter set in the basement.
  - c. If deemed necessary, relocate the water meter or relocate the connection to the public water system, or both, to conform to City ordinances.
2. The replacement of the water service line is expected to be conducted by excavating at the curb stop, pulling or boring new copper piping, penetrating through the basement wall or floor, installing inlet and outlet valves and connecting the meter setting to the building's internal plumbing. A hole will be made in the basement floor or wall to accept the new copper water service line. In the event that this pulling and boring technique cannot be used,

as determined by Stoughton Utilities or its employees, agents, or contractors, an open cut excavation will be made from the curb stop to the foundation wall in which copper piping will be placed. From there, the replacement shall be conducted by penetrating through the basement wall or floor, installing inlet and outlet valves and connecting the meter setting to the building's internal plumbing. The service line will be grounded in compliance with applicable building codes.

3. Extraordinary physical or other structural obstacles, such as porches, stairs, walls, private walks, or fences that must be removed will be restored "in-kind" if deemed necessary to perform the private water service line replacement.
4. Stoughton Utilities, its employees, agents, and contractors, shall restore the exterior work site to its pre-replacement condition as follows:
  - a. Restoration of the Owner's side of the private water service line is limited to the excavation and impacted lawn areas. Impacted lawn areas shall be backfilled to include no less than 6" of topsoil.
  - b. The hole in the basement wall or floor made to accept the new copper water service line shall be patched within three days.
5. Owner shall be responsible for the restoration or repair of any removed non-structural obstacles, such as, but not limited to landscaping, trees, shrubs, and flower beds.
6. Stoughton Utilities, its employees, agents, and contractors, shall keep the Property free of liens resulting from the private lead or galvanized steel service line replacement activities.
7. Stoughton Utilities anticipates that the excavation for the pulling and boring technique will be six (6) feet by eight (8) feet at the curb stop. If open cut excavation must be used, the excavation will be approximately three (3) – five (5) feet wide from the curb stop to the foundation wall.
8. The ownership and maintenance requirements of the new water service line shall remain the responsibility of the Owner.
9. Contractors of Stoughton Utilities engaged to complete the replacement of the private water service line will televise the private sanitary sewer lateral before completing any construction activities on-site and will televise the private sanitary sewer lateral following the completion of the private water service replacement. Owner has right to view both the pre-construction and post construction televising of their private sanitary lateral within 10 days of the completion of the private water service replacement.

Unless Owner notifies Stoughton Utilities of any damage to the private sanitary sewer within 10 days after viewing the televising, Owner hereby releases and holds harmless Stoughton Utilities, its employees, the City of Stoughton, its employees, and the City building inspector and his or her designees, from any and all damages, losses or injuries caused by or which relate to the replacement of the private water service in any way whatsoever, including damages or losses which were caused, in whole or in part, by negligence.
